Paese terzo di destinazione

*Area of production: Liguria - Province of Savona - (Italy).

Consignment complies Great Britain's Plant Health import requirements, Regulation 2020/1527 schedule 7/Annex 7 Part A, item 6(a)(i), item 8(a) and 8(b)(iii), item 8A(a), item 28(b), item 40(b) and part B item 4(b). The specified plants originate in an area free from *Xylella fastidiosa* (Wells et al.): Italy, other than pre-notified demarcated areas.

Place of production: see distinguishing marks.

Part A

Item 6(a)(i) plants originate in an area established by the national plant protection organization in accordance with ISPM4 as an area that is free from *Thrips palmi* Karny

Item 8(a) and 8(b)(iii) no symptoms of the relevant pests have been observed on the plants during their complete cycle of vegetation and the plants originate in a third country where *Bemisia tabaci* (Gennadius) or other vectors of the relevant pests are known to occur and no symptoms of the relevant pests have been observed on the plants during their complete cycle of vegetation and the plants have been subjected to an effective treatment ensuring the eradication of *Bemisia tabaci* (Gennadius) and the other vectors of the relevant pests and have been found free from those pests prior to export.

Item 8A(a) Plants originate in an area* established by the national plant protection organisation of the country of origin in accordance with ISPM4 as an area that is free from *Popillia japonica* Newman.

Item 28(b) No symptoms of *Candidatus Phytoplasma 'solani'* Quaglino et al. have been observed on the plants at the place of production since the beginning of the last complete cycle of vegetation.

Item 40(b) No signs of *Liriomyza huidobrensis* (Blanchard) or *Liriomyza trifolii* (Burgess) have been observed at the place of production, on official inspections carried out at least monthly during the three months prior to harvesting.

Part B

Item 4(b) Plants have been grown:(i) the plants have been grown in a place of production which has been registered and supervised by the national plant protection organization for a period of at least a year before the export of the plants,(ii) the place of production, together with a 200m zone surrounding the place of production, is known to be free from *Xylella fastidiosa* (Wells et al.) on the basis of official inspections, which included testing where appropriate, that was carried out at appropriate times;(iii) the plants have been subjected to an annual official inspection at an appropriate time, which included sampling and testing, that confirmed the absence of *Xylella fastidiosa* (Wells et al.) and was carried out in accordance with international standards using a sampling scheme able to identify with 99% reliability a level of presence of infected plants of 5%,(iv) immediately before their export, the plants were subjected to an official visual inspection for the presence of *Xylella fastidiosa* (Wells et al.) and, where any symptoms giving rise to a suspicion of its presence were observed, were tested in line with international standards for its presence, confirming its absence, (v) where there has been any evidence of the presence of the vector of *Xylella fastidiosa* (Wells et al.) at the place of production, chemical and cultural controls have been used to suppress the vector, and (vi) the plants have been grown throughout their life under complete physical protection, and appropriate hygiene measures have been implemented at the place of production to ensure that *Xylella fastidiosa* (Wells et al.) is not transmitted by tools or equipment.
