II Additional declaration

Buxus sempervirens (0001); Ilex crenata (0003); Taxus baccata (0002)

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 6ai: The plants originate in The Netherlands as an area established by the national plant protection organisation in accordance with ISPM4 as an area that is free from Thrips palmi.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8A a: the plants originate in the Netherlands established by the national plant protection organisation in accordance with ISPM4 as an area that is free from Popillia japonica

Cordyline australis (0006); Cordyline indivisa (0007)

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 6ai: The plants originate in Italy as an area established by the national plant protection organisation in accordance with ISPM4 as an area that is free from Thrips palmi.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8A b: have been grown in a place of production established by the national plant protection organisation in the country of origin in accordance with ISPM10 as a place of production that is free from Popillia japonica: (i) which has been subject to an annual official inspection and, at least, a monthly inspection during the three months prior to export, for any signs of Popillia japonica, carried out at appropriate times to detect the presence of the pest concerned, at least by visual examination of all plants, including weeds, and sampling of the growing media in which plants are growing, (ii) which is surrounded by a buffer zone of at least 100 m, where the absence of Popillia japonica was confirmed by official surveys carried out annually at appropriate times, (iii) immediately prior to export the plants and the growing media have been subjected to an official inspection, including the sampling of the growing media, and found free from Popillia japonica, and (iv) the plants: – are handled and packed or transported in ways to prevent infestation from Popillia japonica after leaving the place of production or – are moved outside the flight season of Popillia japonica.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8a + 8bii: No symptoms of the relevant pests (Begomo viruses, Cucumber vein yellowing virus, Cucurbit yellow stunting disorder virus, Lettuce infectious yellow virus, Melon yellowing-associated virus, Squash vein yellowing virus, Sweet potato chlorotic stunt virus, Sweet potato mild mottle virus, Tomato mild mottle virus, Tomato leaf curl New Delhi virus) have been observed on the plants during their complete cycle of vegetation, and the site of production has been found free from Bemisia tabaci and other vectors of the relevant plant pests on official inspections carried out at appropriate times to detect those pests.

Laurus nobilis (0005)

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 6ai: The plants originate in Italy as an area established by the national plant protection organisation in accordance with ISPM4 as an area that is free from Thrips palmi.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8A b: have been grown in a place of production established by the national plant protection organisation in the country of origin in accordance with ISPM10 as a place of production that is free from Popillia japonica: (i) which has been subject to an annual official inspection and, at least, a monthly inspection during the three months prior to export, for any signs of Popillia japonica, carried out at appropriate times to detect the presence of the pest concerned, at least by visual examination of all plants, including weeds, and sampling of the growing media in which plants are growing, (ii) which is surrounded by a buffer zone of at least 100 m, where the absence of Popillia japonica was confirmed by official surveys carried out annually at appropriate times, (iii) immediately prior to export the plants and the growing media have been subjected to an official inspection, including the sampling of the growing media, and found free from Popillia japonica, and (iv) the plants: – are handled and packed or transported in ways to prevent infestation from Popillia japonica after leaving the place of production or – are moved outside the flight season of Popillia japonica.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8a + 8bii: No symptoms of the relevant pests (Begomo viruses, Cucumber vein yellowing virus, Cucurbit yellow stunting disorder virus, Lettuce infectious yellow virus, Melon yellowing-associated virus, Squash vein yellowing virus, Sweet potato chlorotic stunt virus, Sweet potato mild mottle virus, Tomato mild mottle virus, Tomato leaf curl New Delhi virus) have been observed on the plants during their complete cycle of vegetation, and the site of production has been found free from Bemisia tabaci and other vectors of the relevant plant pests on official inspections carried out at appropriate times to detect those pests.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part B item 2c: The plants have been produced in a site: (aa) that is authorised by the national plant protection organisation in accordance with ISPM10 as a site that is free from Xylella fastidiosa and its vectors, (bb) that is physically protected against the introduction of Xylella fastidiosa by its vectors, (cc) that is surrounded by a zone with a width of 100 m which has been subject to official inspections twice a year, and where all of the plants found to be infected with, or to have symptoms of, Xylella fastidiosa have been immediately removed, and appropriate phytosanitary treatments against the vectors of Xylella fastidiosa have been applied before that removal, (dd) that at appropriate times throughout the year, is subject to phytosanitary treatments to maintain freedom from the vectors of Xylella fastidiosa, including the removal of plants, (ee) that is subject annually, together with the zone referred to in point (cc), to at least two official inspections during the flight season of the vectors of Xylella fastidiosa, (ff) where throughout the production time of the plants, neither symptoms of Xylella fastidiosa nor its vectors were found in the site or, if suspect symptoms were observed, testing was carried out and the absence of Xylella fastidiosa confirmed, and (gg) where throughout the

production time of the plants, no symptoms of *Xylella fastidiosa* were found in the zone referred to in point (cc) or, if suspect symptoms were observed, testing was carried out and the absence of *Xylella fastidiosa* confirmed, and (ii) that representative samples of each species of the plants from the site have been subject to annual testing, at the most appropriate time, and the absence of *Xylella fastidiosa* has been confirmed on the basis of tests carried out in accordance with internationally validated testing methods, and (iii) that the plants have been transported in closed containers or packaging, to prevent infection with *Xylella fastidiosa* or any of its known vectors, and (iv) that as close to the time of export as is practically possible, the lots of the plants were subject to official visual inspection, sampling and molecular testing, carried out in accordance with internationally validated testing methods, using a sampling scheme able to identify with 99% reliability the level of presence of infected plants of 1%, that targets in particular plants displaying symptoms of *Xylella fastidiosa*, and that confirmed the absence of *Xylella fastidiosa*, and (v) that immediately before export, the lots of the plants were subject to phytosanitary treatments against any known vectors of *Xylella fastidiosa*.

Olea europaea (0004)

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 6ai: The plants originate in Italy as an area established by the national plant protection organisation in accordance with ISPM4 as an area that is free from *Thrips palmi*.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8A b: have been grown in a place of production established by the national plant protection organisation in the country of origin in accordance with ISPM10 as a place of production that is free from *Popillia japonica*: (i) which has been subject to an annual official inspection and, at least, a monthly inspection during the three months prior to export, for any signs of *Popillia japonica*, carried out at appropriate times to detect the presence of the pest concerned, at least by visual examination of all plants, including weeds, and sampling of the growing media in which plants are growing, (ii) which is surrounded by a buffer zone of at least 100 m, where the absence of *Popillia japonica* was confirmed by official surveys carried out annually at appropriate times, (iii) immediately prior to export the plants and the growing media have been subjected to an official inspection, including the sampling of the growing media, and found free from *Popillia japonica*, and (iv) the plants: – are handled and packed or transported in ways to prevent infestation from *Popillia japonica* after leaving the place of production or – are moved outside the flight season of *Popillia japonica*.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part A item 8a + 8bii: No symptoms of the relevant pests (Begomo viruses, Cucumber vein yellowing virus, Cucurbit yellow stunting disorder virus, Lettuce infectious yellow virus, Melon yellowing-associated virus, Squash vein yellowing virus, Sweet potato chlorotic stunt virus, Sweet potato mild mottle virus, Tomato mild mottle virus, Tomato leaf curl New Delhi virus) have been observed on the plants during their complete cycle of vegetation, and the site of production has been found free from *Bemisia tabaci* and other vectors of the relevant plant pests on official inspections carried out at appropriate times to detect those pests.

The consignment complies with Annex 7 to Great Britain's Phytosanitary Regulation (2019/2072), part B item 5b: (i) The plants have been grown in a place of production which has been registered and supervised by the national plant protection organisation for a period of at least one year before the export of the plants, and (ii) the place of production, together with a 200m zone surrounding the place of production, is known to be free from *Xylella fastidiosa* on the basis of official inspections, which included testing where appropriate, carried out at appropriate times during the 12 months before the export of the plants, and (iii) the plants have been subjected to an annual official inspection at an appropriate time, which included sampling and testing, that confirmed the absence of *Xylella fastidiosa* and was carried out in accordance with international standards using a sampling scheme able to identify with 99% reliability a level of presence of infected plants of 1%, and (iv) immediately before their export, the plants were subjected to an official visual inspection for the presence of *Xylella fastidiosa* and, where any symptoms giving rise to a suspicion of its presence were observed, were tested in line with international standards for its presence, confirming its absence, and (v) where the place of production of the plants is located in an area where *Xylella fastidiosa* is known to occur, the plants have been grown under complete physical protection for a period of at least four years before their export or, in the case of plants which are younger than four years, throughout their life.
